

AMERICAN HANDWRITING ANALYSIS FOUNDATION:

AHAF ONLINE CONFERENCE NOVEMBER 2ND 2019

THE PSI MODEL OF THE BRAIN AND IT'S HELP IN HANDWRITING

Lecture by ZOOM at AHAF:
2nd November 2019 – 18:30 pm MEZ (12 pm EST, New York Time)
www.ahafhandwriting.org

with

Dr. Marie Anne Nauer

The rather new PSI – Psychic System's Interaction – Model, established by the German psychologist Julius Kuhl, is based on recent studies in neuroscience, neurophysiology, and psychology, thus described as an interacting system of four psychic parts, and conceived by the author as "Quadrifocal Brain". The model allows to integrate and enhance the ancient theory of the German physician and graphologist Rudolf Pophal, that was based on the neuroscience of his period of the 1940ies - nowadays ruled out, yet, *mutatis mutandis*, of some important impact.

Based on this quadrifocal modal, we try to understand better and to see in a new light the important role of a modern concept of tension in handwriting. By means of handwriting examples we will discuss a useful implementation of the new model in our every day's handwriting analysis.
